Challenge – the with photo toggle

The business have left some feedback that they would like another filter to allow the users to choose to only display members who have a photo.

You have been given this task to complete.

1. Since all the demo users have a photo you will need to update the DB and remove the image for a user to test this.

2. The Switch component from Nextui is the ideal component for this task

3. A prisma query to get something that is not null would look like this:

```
where: {image: {not: null}
```
