Challenge notes – setting of the main image

The image in the avatar is not updating when the user updates their main image until they logout and log back in again. The business would like this functionality changed so it is also updated when the user clicks on the main image button. This task has been handed to you.

1. Why is the image not updating like the other one in the sidebar?

2. Where is the image coming from in the nav bar?

3. Can the place where this image is coming from be updated with the new main image?

4. Try and resolve this as efficiently as is currently possible with what we have in our project and without installing any additional packages including the updating of the 'Signed in as ...' in the user menu dropdown.

If you are stuck on this these 2 links may give you some pointers...
